

LED Mood Light

AS-33-0012

The Mood light allows you to control your own light scenarios. With the touch of a button you can change colors, function and light sequences.

According to your mood you can create different colors: a stimulating red, a calming blue, an enforcing orange or relaxing green. By changing the intensity of the primary colors red, green and blue you can blend unlimited color combinations.

Preprogrammed Mood light sequences Chill, Motion and Action will calm your soul, stimulate your senses and thrill your mind. You can display active light functions, random interchanging colors combinations, rainbow colors sequences, fusions of gradually changing colors. You can control the speed of all functions.

Thru the RGB LEDs you can obtain up to 16 million colors combinations to change the interior aircraft scenario in accordance with your needs.

Our system now comes with a Touch-Screen LCD control panel, wich basic controls all interior environment, including mood-lighting, sounds, flight-information, etc. The system can be customized as per aircraft configuration or customer request.

To easily customize your mood lighting experience, you can preset colors in your computer and update using a USB interface. After that, your pre-selected colors will be shown on the display and you can select each at your wish. You can also use this USB interface to update your controller software.

Touch-Screen LCD Control Panel

Advantages
